Education

The University of Chicago

Chicago, IL

B.S. Computer Science, B.A. Statistics | GPA: 3.6/4.0

Sep 2024 – Jun 2028

- **Relevant Coursework:** Theory of Algorithms, Data Structures, Databases, Systems Programming, Discrete Mathematics.
- **AI Development Program** (Career Advancement Office & Data Science Institute): four-part workshop series on agent loop architecture, function calling, context engineering, and production monitoring; built AI systems in **Python**/Jupyter.
- **Involvement:** Sports Analytics Group (Web Developer), Algo Group, Maroon Capital, Kappa Theta Pi Tech Fraternity.

Professional Experience

SAS

Cary, NC

Software Developer Intern — Flow Team

May 2026 – Aug 2026

- Engineered canvas grid and alignment features for flows in SAS Data and AI Studio (formerly SAS Studio), the drag-and-drop canvas where **SAS Viya** users build no-code ETL data pipelines, on a cross-functional **Agile/Scrum** team.
- Researched the **GoJS API** and implemented gridline rendering, snap-to-grid, and real-time alignment guide logic in **React** and **TypeScript**, using **Storybook** to improve layout precision for large-scale enterprise data flows.
- Authored **45+ Jest unit tests** and **Playwright** end-to-end regression suites, securing 90%+ coverage in **CI/CD** pipelines.
- Merged features in **Git**, resolved merge conflicts, and participated in code review, tracking tickets in **Jira/Confluence**.

North Carolina Football Club

Cary, NC

Data Analyst (Part-Time)

Jul 2025 – Oct 2025

- Designed a **PostgreSQL** database and back-end pipeline centralizing 45+ metrics for 25+ USL Championship (US second division) professional athletes.
- Processed 30,000+ StatSports GPS entries from 2024 and 2025 in **R**, reporting load, recovery trends, and return-to-play baselines for injured players through automated weekly **Plotly/ggplot2** dashboards that cut manual reporting time for coaches by 80%.

Projects

Make 24: Multiplayer | React, TypeScript, Vite, Supabase, Tailwind CSS

Apr 2026 – Present

- Built the first real-time multiplayer 24 Game, reaching 50+ users across blitz, timed, and 1v1 modes on make24.live.
- Engineered a custom **TypeScript** engine (recursive solver, puzzle generation) over a **Supabase Realtime** state-sync layer handling concurrent move resolution, ELO matchmaking, and reconnection recovery.
- Currently building multiplayer party modes for larger concurrent lobbies and a cross-platform iOS client reusing the core **TypeScript** engine.

FireCV | React, Three.js, React Three Fiber, TypeScript | 2nd/100+ teams, Overshoot Track — NexHacks

Jan 2026

- Developed the 3D fire-evacuation training simulator for a three-service emergency guidance system, modeling a multi-floor campus building in **Three.js/React Three Fiber** with first and third-person camera POVs.
- Integrated the 3D environment with a navigation graph and scenario engine so AI-generated fire hazards dynamically blocked traversable paths and aligning the graph with the **Overshoot** computer vision API.

Hyde Park Divvy Bike Analysis | React, TypeScript, PostgreSQL, ECharts

Mar 2025 – Present

- Built a full-stack analytics platform on 5M+ records of Chicago Divvy open data, filtering to 109,829 trips across 20 Hyde Park and UChicago-area stations (2024–2025) in a **PostgreSQL** database.
- Designed a **React/TypeScript/Vite** front end with **Apache ECharts** surfacing station popularity, seasonal ridership, and a 75–80% member vs. casual usage split; deployed on GitHub Pages.
- Extending the pipeline to 2026 and prior historical seasons with year-over-year comparison views, and exploring forecasting models for station-level ridership growth.

Silo | Next.js, TypeScript, FastAPI, Python | 3rd Place (\$600) — ALI Builds Hackathon

May 2026

- Built a commodity sale-optimization engine for grain farmers, computing expected value across sell-now, wait, and store+ hedge scenarios from live CBOT, USDA, FRED, and NOAA API data.
- Exposed the engine through a **Python/FastAPI** REST back end and a **Next.js/TypeScript** dashboard, using an LLM only to translate deterministic model outputs into plain-language recommendations and fair-price breakdowns.

Technical Skills

Languages: Python, TypeScript, JavaScript, HTML/CSS, SQL, R, Rust, C

Frameworks & Tools: React, Git, Jira, Confluence, FastAPI, REST APIs, Linux/CLI, Storybook, Next.js, Node.js, Three.js, Docker

Databases & Cloud: PostgreSQL, Supabase, Snowflake, MongoDB, AWS

AI/ML: PyTorch, scikit-learn, RAG, AI APIs

Leadership & Activities

University of Chicago Varsity Men's Soccer

Chicago, IL

NCAA DIII Student-Athlete | All-American (4th Team), All-Region & All-UAA (1st Team)

Aug 2024 – Present

- One of ~50 DIII players nationally to earn All-American honors while committing 25+ hrs/week to training and games alongside coursework and extracurriculars.
- Earned UAA Presidents Council Scholar-Athlete (Mar 2025–26), CSC Academic All-District, and Academic All-UAA.
- Serve on the team leadership council alongside the captains, represent the program's as the Order of the C representative and member of the Team IMPACT group.
